

Rapid fire

Create a spiral matrix. (You can find this problem in Leetcode
<https://neetcrxfe.com/problems/spiral-matrix/>)

The screenshot displays a web browser window showing a LeetCode submission for the "Spiral Matrix" problem. The URL in the address bar is <https://leetcode.com/problems/spiral-matrix/submissions/2158368377/>. The page is divided into several sections:

- Problem List:** Shows the problem name "Spiral Matrix" and the submission status "Accepted".
- Submission Details:** Indicates that 27 out of 27 test cases passed. The submission was made by user "nandini_112233" on September 30, 2026, at 22:02. There are buttons for "Analysis" and "Solution".
- Performance:** Shows a runtime of 0 ms (Beats 100.00%) and a memory usage of 9.35 MB (Beats 55.70%). A bar chart shows the runtime performance relative to other submissions.
- Code:** Displays the C++ code for the solution. The code defines a class "Solution" with a method "spiralOrder" that takes a 2D vector of integers and returns a vector of integers in spiral order.
- Testcase:** Shows the input for the test case: "matrix = [[1,2,3],[4,5,6],[7,8,9]]". The output is not visible.

```
1 class Solution {
2 public:
3     vector<int> spiralOrder(vector<vector<int>>& matrix) {
4         vector<int> ans;
5
6         int top = 0;
7         int bottom = matrix.size() - 1;
8         int left = 0;
9         int right = matrix[0].size() - 1;
10    }
```
